The Red Hat® JBoss® BPM Suite Kickstarter Program

Many organisations are aware of the benefits of Business Process Management and the potential of formalising rules and processes as a way of achieving business agility, shortening development cycles and getting products to market faster.

Making a choice of which technology is right for your business is not easy and conducting research in a way that shows project teams how to build sophisticated business automation solutions can be a challenge.

Tier 2 Consulting – the first Red Hat Premier Middleware Partner in the UK&I – has created the JBoss BPM Suite Kickstarter Program to offer clients a structured way to handle this challenge, giving you the ability to effectively conduct a 'try before they buy' PoC type evaluation.

Here's what we do

By using processes and rules specific to your business, and by providing expert advice and guidance from accredited Red Hat consultants / trainers, a personalised BPM Kickstarter Program will allow stakeholders to experience first-hand the benefits of the Red Hat JBoss BPM Suite.

Professionals with a responsibility for business process management across your business can assess the technology and its capabilities together, in a collaborative environment.
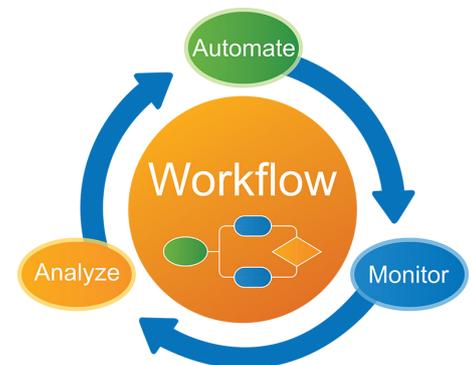

Tier 2 can you help map out a set of tasks, estimates and costs for a full BPM Suite deployment in your environment, thus allowing your teams to make an informed decision.

Getting hands-on with the full functionality of the Red Hat JBoss BPM Suite is an invaluable way of understanding what you can achieve without the need for an army of developers to implement it.

By exploring the 'low-code' mechanics of the BPM Suite during our Kickstarter, you'll discover just how easy it is to develop business processes and rules.

What can you expect?

To ensure maximum value is extracted from the program, each Kickstarter is run in a hands-on workshop format to facilitate knowledge transfer, skills training and mentoring.

The Red Hat® JBoss® BPM Suite Kickstarter Program

Our BPM Kickstarter engagement is split across 3 stages:

Stage 1

» Introduction to the Red Hat BPM Suite with a features & benefits overview

» Identification and exploration of 2-3 real processes to model during the Kickstarter, based on pre-prepared research and consultation with Tier 2 and the BPM Kickstarter Team Leader from your organisation.

» BPM Suite familiarisation sessions using a fully hosted development environment provided by Tier 2 Consulting.

Stage 2

Process development, comprising:

» Analysis

» Data modelling

» Process design

» Form design

» Rule authoring

» Implementation and deployment

» Testing scenarios

Stage 3

Next steps planning for future process automations.

How long does a BPM Kickstarter take?
Typically conducted over a 4-week period, with between 5 and 10 days expert consultancy provided by Tier 2, the BPM Suite Kickstarter costs from £4995 + VAT.

Why choose the Red Hat JBoss BPM Suite?
Red Hat JBoss BPM Suite combines business process management (BPM), business rules management (BRM), business resource planning, and complex event processing (CEP) technologies into a single, integrated platform.

It enables users to capture business policies and procedures, automate business operations, and measure the results of business activities across heterogeneous environments including physical, virtual, mobile, and cloud.

Any questions?

To discuss the Tier 2 Red Hat BPM Suite Kickstarter program please call us on +44 (0)1438 310124 or email info@tier2consulting.com

NOTES

» *Internet access to browser-based environments is the only requirement for participants.*

» *A hosted development environment will be provided by Tier 2 – participating clients require no pre-provisioning of hardware or software.*

» *The artefacts developed during the Kickstarter (rules and processes) will be exported at the end of the program to allow clients to re-use them in another BPM Suite environment should they wish.*

» *Includes a free 30 Day Subscription to the JBoss BPM Suite Development Environment.*
